

SAVE THE PLANET AND SAVE A BUCK

Everytime you recycle, reuse, reduce, you not only help the environment but you save money too!

THE FIVE R'S - "RECYCLE"

- Buy a smaller trash container for the kitchen. This makes you to remember to recycle.
- Make sure bottles and tins are clean before putting in the recycling bin. This prevents flies both at home and the recycling station.
- Reorganize the kitchen so it has an efficient recycling area with good sized bins to help with sorting and holding. This will encourage other members of the household to contribute and help share the work instead of it being reliant on one person.
- Cutting both the tops and the bottoms off tin cans (and placing them inside) and squashing them makes them smaller to fit into the recycling Bin.

ECO FACTS:

- *One recycled aluminum can will return to something useful in 90 days, BUT if thrown into a landfill that same can will be around for 100 years.*
- *One ton of recycled glass saves the equivalent in energy of 100 gallons of oil, BUT a glass bottle in a landfill will be sitting around for 1 million years.*
- *One Ton of plastic saves 7.4 cubic yards of landfill space, BUT a plastic bottle in a landfill will be sitting there 700 years from now.*
